Fiberglass wallpaper construction non-woven fabric, 1x50m

Construction interlining is a mat made of synthetic and glass fiber intended for creating a perfectly smooth wall surface.

It is embedded in glue so that the glue penetrates its outer surface.

The width of the construction nonwoven fabric is 1 m, which allows for efficient construction of typical walls in residential, office, hotel rooms, etc.

The joints are invisible thanks to the method of cutting with two sharp wallpaper knife.

You need a lot of experience to perform it properly.

A properly finished wall surface after painting gives a beautiful satin texture that cannot be achieved by painting alone.

Additionally, the non-woven fabric strengthens the wall surface and the previously applied plaster.
