Tiling trowel with a hydro-absorbent sponge for cleaning tiles after grouting - 270x130x30 mm

A tile trowel with a THICK (30mm) HYDRO-absorbent sponge with cut COMENSAL brand for cleaning tiles after grouting and other works requiring effective cleaning of washable surfaces.

It has a profiled handle, is porous and collects dirt well without leaving streaks. It is characterized by high absorbency, thanks to which it cleans dirt without splashing. It is easy to rinse and squeeze excess water with the help of glazing rollers and a grid.

Longitudinal and transverse cuts make it even more effective in cleaning compared to smooth sponges.

Developed for effective and comfortable use.

Float with COMENSAL HYDRO-absorbent sponge tested and recommended in the environment of tilers. Due to its features and comfort, it has been a sales hit in this category for years.

Handle:

The ergonomic handle with recesses profiled for the fingers fits well in the hand, gives a sense of comfort and "control" over the tool.

Made of plastic, it was permanently connected to the base with glue.

Sponge:

Thanks to its porous structure and longitudinal-transverse incisions, it carefully and efficiently collects grouting residues from the tiles.

It is HYDROabsorbent. It effectively retains water, thanks to which it is effective at work. After draining, the water remains in the entire underlay, it does not leak downwards. Thanks to this, the tiles are evenly washed with a highly moist sponge, and the workplace is not flooded with dirty water.

It is easy to rinse and squeeze excess water with the use of a tile grate and rollers, thus obtaining the expected moisture of the foundation.

The sponge belongs to the polyurethane group. It is soft and resilient to the touch.

The float being the subject of this auction has the most typical size in the category of tiling floats.

Sponge size: 270x130mm

Sponge thickness: 30mm

After the sponge is used up, it is possible to replace the foundation with a new one. To do this, cut off the used sponge with a knife, get rid of the remnants of the old material left on the trowel and glue the new underlay with waterproof glue - available at other auctions.

Quality:

Working with a float with a COMENSAL hydro-absorbent primer is satisfying, because the tiles quickly regain their shine, the sponge does not leave stains, and the cleaning process takes place without unnecessary splashing

The tool was made of high-quality raw materials, thanks to which it is resistant to damage, and properly maintained, cleaned and stored, it will be useful for a long time.
